EDUCATION

M.S. in AI Convergence (Computer Science) <i>Chonnam National University, South Korea</i>	Mar 2025 GPA: 4.36/4.50
B.S. in Computer Science <i>Vietnam National University – University of Engineering and Technology, Vietnam</i> <i>Thesis: Artificial Intelligence System for Identifying Airport Passengers</i>	Sep 2021 GPA: 3.05/4.00 (Score: 9.2/10)

EXPERIENCE

Computer Scientist <i>Else Kröner Fresenius Center for Digital Health (EKFZ), TU Dresden, Germany</i>	Aug 2025 — July 2026
- Creating explainable deep learning pipelines for biomedical data analysis and clinical decision support systems.[Highlight] - Developing and deploying LLM agents for clinical applications with open-source models.	
Research Graduate Student <i>Smart Computing Lab, Chonnam National University, South Korea</i>	Mar 2023 — Mar 2025
- Researched multimodal representation learning and generative modeling for dyadic facial reaction generation. - Investigated medical image analysis and multimodal recognition frameworks. - Developed a multi-scale facial emotion recognition model for pediatric video data. - Designed an LLM-based clinical simulation framework for controllable patient-case generation.	
Research Assistant <i>Human-Machine Interaction Lab, VNU University of Engineering and Technology, Vietnam</i>	Jul 2021 — Jan 2023
- Contributed to a government-funded project on AI-based reconstruction of historical woodblocks. - Proposed a 2D–3D registration algorithm aligning character images with point cloud meshes [Paper]. - Developed point cloud refinement and upsampling methods for 3D reconstruction.	
AI Engineer <i>FPT Software & Hyperlogy Corp., Vietnam</i>	2020 — 2022
- Developed 3D point cloud semantic segmentation models for industrial defect detection (enhanced Point Transformer). - Implemented OCR, face verification, and multimodal identity recognition systems.	
Assistant <i>Revotech Lab</i>	2019 <i>VNU University of Engineering and Technology, Vietnam</i>
Developed a PixiJS-based scientific data visualization web tool.

Other Conferences

Transformer with Leveraged Masked Autoencoder for Video-based Pain Assessment. BIGDAS 2024.

Leveraging WaveNet for Dynamic Listening Head Modeling from Speech. MITA 2024.

Document-based LLaMA-2 Chatbot for Medical Diagnosis. KSIM 2024.

Multiple Listener Facial Generation via Variational Autoencoder. KCSE 2023.

AWARDS AND SCHOLARSHIPS

Chonnam National University Scholarship (Outstanding academic performance)	2023–2024
Best Paper Award – BIGDAS	2024
Outstanding Short Paper Award – KCSE	2023
Gold Prize – Generative AI Hackathon (LLM-based multimodal chatbot with talking-face synthesis.)	2023
Third Prize – Vietnam National Olympiad in Informatics (Regional)	2015

SKILLS

Programming	Python, C/C++
ML Frameworks	PyTorch, HuggingFace, CUDA
Research Areas	Diffusion models, multimodal learning, vision-language modeling
Systems	Linux, Docker, Git, Slurm/HPC clusters
Languages	Vietnamese (native), English (B2; IELTS 6.5), German (A1.1)
